**REGISTER NOW**

The use of antimicrobial drugs has revolutionized medicine, making a wide range of infections readily treatable. However, any use of antimicrobials also contributes to the emergence of resistance. Today, antimicrobial resistance (AMR) is recognized as the most significant global public health threat, with multidrug-resistant organisms becoming increasingly prevalent. This webinar will address the unique challenges encountered in exotic animal medicine and explore responsible antimicrobial prescribing practices that help mitigate the AMR crisis while preserving the efficacy of available treatments. Effective infection control and biosecurity strategies will also be explored.

## Lecture outline

- I. Antimicrobial resistance (AMR) crisis
- II. Mechanisms of AMR
- III. Veterinary nosocomial infections
- IV. Antimicrobial stewardship measures
- V. Challenges commonly encountered in exotic animal medicine
